Chapter 1

HOW TO RUN

Searchable DB Library Install

```
cd ./big3_searchable_hedb/HDB_comparison_library
rm -r build
mkdir build
cd build
```

If HElib is installed as a library...

```
cmake ..
```

If HElib is locally installed...

```
cmake -Dhelib_DIR={PATH}/helib_install/helib_pack/share/cmake/helib ..
```

then

```
make install
```

installs the HDB library in the folder `./big3_searchable_hedb/lib_HDB`

To run main code...

```
cd ./big3_searchable_hedb
rm -r build
mkdir build
cd build
```

then run cmake and make as above. Compiled binary will be in `./big3_searchable_hedb/bin`

API

Can be found in the `./html` directory. Open `index.html` to access the API documentation.

Chapter 2

Namespace Index

2.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

HDB_supergate_	7
HDB_supergate_server_ Namespace for the SERVER class	9
HDB_supergate_user_ Namespace for the USER class	10

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

HDB_supergate_::BGV_param	11
he_cmp::Comparator	12
HDB_supergate_::CSVIterator	13
HDB_supergate_::CSVRange	14
HDB_supergate_::CSVRow	14
HDB_supergate_::CtxtIndex	
Class representing an encrypted ciphertext index	14
HDB_supergate_::CtxtIndexFile	
Class representing a ciphertext index file	16
HDB_supergate_::HEQuery	
Object representing a query object used to query the HEDB	18
HDB_supergate_::PtxtIndex	
Class representing a plaintext index	21
HDB_supergate_::PtxtIndexFile	
Class representing a collection of PtxtIndexes	24
HDB_supergate_server::SERVER	
Class that contains the DB and is queried upon	26
HDB_supergate_::STD128_HDB	27
HDB_supergate_::TOY_HDB	28
HDB_supergate_user::USER	
Class that simulates the USER that queries the DB	28

Chapter 4

Namespace Documentation

4.1 HDB_supergate_ Namespace Reference

Classes

- struct [BGV_param](#)
- class [CSVIterator](#)
- class [CSVRange](#)
- class [CSVRow](#)
- class [CtxtIndex](#)
class representing an encrypted ciphertext index
- class [CtxtIndexFile](#)
class representing a ciphertext index file
- class [HEQuery](#)
Object representing a query object used to query the HEDB.
- class [PtxtIndex](#)
class representing a plaintext index
- class [PtxtIndexFile](#)
class representing a collection of PtxtIndexes
- struct [STD128_HDB](#)
- struct [TOY_HDB](#)

Typedefs

- typedef std::vector< helib::Ctxt > [Ctxt_vec](#)
- typedef std::vector< std::vector< helib::Ctxt > > [Ctxt_mat](#)

Enumerations

- enum [Q_TYPE_t](#) {
 EQ, LT, LEQ, MIN,
 MAX, EQ, LT, LEQ,
 MIN, MAX }
- enum [Q_TYPE_t](#) {
 EQ, LT, LEQ, MIN,
 MAX, EQ, LT, LEQ,
 MIN, MAX }

Functions

- `std::istream & operator>> (std::istream &str, CSVRow &data)`
- `struct BGV_param MakeBGVParam (long, long, long, long, long, long, long, long, long)`
- `helib::Context MakeBGVContext (long, long, long, long, long, long)`
- `helib::Context MakeBGVContext (const struct BGV_param)`
- `void setIndexParams (unsigned long, unsigned long, unsigned long, unsigned long &, unsigned long &, bool)`
- `void dataToZZXSlot (unsigned long data, vector< ZZX > &dest, unsigned long counter, unsigned long digit_base, unsigned long exp_len, unsigned long enc_base, he_cmp::Comparator &comparator)`
- `void encryptAndInsert (const helib::Context &contx, helib::PubKey &pk, std::vector< NTL::ZZX > &ptxt, Ctxt_vec &dest)`
- `long findNSlots (long, long)`
- `istream & operator>> (istream &str, CSVRow &data)`
- `void encryptAndInsert (const Context &contx, PubKey &pk, vector< ZZX > &ptxt, Ctxt_vec &dest)`

4.1.1 Detailed Description

main namespace for all utility functions for a HEDB

4.1.2 Typedef Documentation

4.1.2.1 Ctxt_mat

```
typedef std::vector< std::vector< helib::Ctxt > > HDB_supergate_::Ctxt_mat
```

a matrix of ciphertexts, Ctxt_mat

4.1.2.2 Ctxt_vec

```
typedef std::vector< helib::Ctxt > HDB_supergate_::Ctxt_vec
```

a vector of ciphertexts, Ctxt_vec

4.1.3 Enumeration Type Documentation

4.1.3.1 Q_TYPE_t [1/2]

```
enum HDB_supergate_::Q_TYPE_t
```

Query Type Enum A query can be equal EQ, less than LT, or less than or equal to LEQ. MIN and MAX queries are not supported yet.

4.1.3.2 Q_TYPE_t [2/2]

```
enum HDB_supergate_::Q_TYPE_t
```

Query Type Enum A query can be equal EQ, less than LT, or less than or equal to LEQ. MIN and MAX queries are not supported yet.

4.1.4 Function Documentation

4.1.4.1 MakeBGVContext()

```
helib::Context HDB_supergate_::MakeBGVContext (
    const struct BGV_param )
```

function to create a helib::Context given parameters

4.1.4.2 MakeBGVParam()

```
struct BGV_param HDB_supergate_::MakeBGVParam (
    long ,
    long ,
    long ,
    long ,
    long ,
    long ,
    long ,
    long ,
    long )
```

function to create BGV_Param given parameters

4.2 HDB_supergate_server_ Namespace Reference

Namespace for the [SERVER](#) class.

Classes

- class [SERVER](#)
Class that contains the DB and is queried upon.

4.2.1 Detailed Description

Namespace for the [SERVER](#) class.

4.3 HDB_supergate_user_ Namespace Reference

Namespace for the [USER](#) class.

Classes

- class [USER](#)

Class that simulates the [USER](#) that queries the DB.

4.3.1 Detailed Description

Namespace for the [USER](#) class.

Chapter 5

Class Documentation

5.1 HDB_supergate_::BGV_param Struct Reference

```
#include <HDB_supergate.hpp>
```

Public Attributes

- long **p**
- long **d**
- long **m**
- long **nb_primes**
- long **expansion_len**
- long **c**
- long **scale**
- long **r**

5.1.1 Detailed Description

[BGV_param](#) struct A struct representing all necessary parameters to construct a BGV crypto context and the necessary comparison logic.

The documentation for this struct was generated from the following file:

- HDB_comparison_library/include/HDB_supergate.hpp

5.2 he_cmp::Comparator Class Reference

Public Member Functions

- DoubleCRT **create_shift_mask** (double &size, long shift)

- [Ctxt_vec](#) & **keys** ()
- [Ctxt_mat](#) & **uids** ()
- unsigned long **getX** ()
- unsigned long **getY** ()

5.6.1 Detailed Description

class representing an encrypted ciphertext index

A ciphertext index has a Ctxt_vec type of encrypted keys and Ctxt_mat type of encrypted uids. The encrypted uids has dimension of X rows and Y columns.

5.6.2 Member Function Documentation

5.6.2.1 getX() [1/2]

```
unsigned long HDB_supergate_::CtxtIndex::getX ( ) [inline]
```

getter for X value

5.6.2.2 getX() [2/2]

```
unsigned long HDB_supergate_::CtxtIndex::getX ( ) [inline]
```

getter for X value

5.6.2.3 getY() [1/2]

```
unsigned long HDB_supergate_::CtxtIndex::getY ( ) [inline]
```

getter for Y value

5.6.2.4 getY() [2/2]

```
unsigned long HDB_supergate_::CtxtIndex::getY ( ) [inline]
```

getter for Y value

5.6.2.5 keys() [1/2]

```
Ctxt_vec& HDB_supergate_::CtxtIndex::keys ( ) [inline]
```

getter for enc_key

5.6.2.6 keys() [2/2]

```
Ctxt_vec& HDB_supergate_::CtxtIndex::keys ( ) [inline]
```

getter for enc_key

5.6.2.7 `uids()` [1/2]

```
Ctxt_mat& HDB_supergate_::CtxtIndex::uids ( ) [inline]
```

getter for enc_uid

5.6.2.8 `uids()` [2/2]

```
Ctxt_mat& HDB_supergate_::CtxtIndex::uids ( ) [inline]
```

getter for enc_uid

The documentation for this class was generated from the following file:

- HDB_comparison_library/include/HDB_supergate.hpp

5.7 HDB_supergate_::CtxtIndexFile Class Reference

class representing a ciphertext index file

```
#include <HDB_supergate.hpp>
```

Public Member Functions

- void **encrypt** (PtxtIndexFile &ptIndexFile, he_cmp::Comparator &comparator, const helib::Context &ctx, helib::PubKey &pk, unsigned long input_range, unsigned long digit_base, unsigned long enc_base, unsigned long exp_len, unsigned long nslots, unsigned long max_per, bool verbose)
- void **insert** (std::string colname, PtxtIndex &ptIndex, he_cmp::Comparator &comparator, const helib::Context &ctx, helib::PubKey &pk, unsigned long input_range, unsigned long digit_base, unsigned long enc_base, unsigned long exp_len, unsigned long nslots, unsigned long max_per, bool verbose)
- void **insert** (std::string colname, CtxtIndex &index)
- CtxtIndex & **find** (unsigned long)
- CtxtIndex & **find** (std::string)
- unsigned long **indexOf** (std::string)
- void **encrypt** (PtxtIndexFile &ptIndexFile, he_cmp::Comparator &comparator, const helib::Context &ctx, helib::PubKey &pk, unsigned long input_range, unsigned long digit_base, unsigned long enc_base, unsigned long exp_len, unsigned long nslots, unsigned long max_per, bool verbose)
- void **insert** (std::string colname, PtxtIndex &ptIndex, he_cmp::Comparator &comparator, const helib::Context &ctx, helib::PubKey &pk, unsigned long input_range, unsigned long digit_base, unsigned long enc_base, unsigned long exp_len, unsigned long nslots, unsigned long max_per, bool verbose)
- void **insert** (std::string colname, CtxtIndex &index)
- CtxtIndex & **find** (unsigned long)
- CtxtIndex & **find** (std::string)
- unsigned long **indexOf** (std::string)

5.7.1 Detailed Description

class representing a ciphertext index file

A ciphertext index file is a collection of CtxtIndexes. It is a collection of <column name, CtxtIndex> pairs, with the column name and corresponding ciphertext index as a pair.

5.7.2 Member Function Documentation

5.7.2.1 find() [1/4]

```
CtxtIndex & HDB_supergate_::CtxtIndexFile::find (
    unsigned long i )
```

Finds the corresponding [CtxtIndex](#) given index of column

5.7.2.2 find() [2/4]

```
CtxtIndex& HDB_supergate_::CtxtIndexFile::find (
    unsigned long )
```

Finds the corresponding [CtxtIndex](#) given index of column

5.7.2.3 find() [3/4]

```
CtxtIndex& HDB_supergate_::CtxtIndexFile::find (
    std::string )
```

Finds the corresponding [CtxtIndex](#) given column name

5.7.2.4 find() [4/4]

```
CtxtIndex& HDB_supergate_::CtxtIndexFile::find (
    std::string )
```

Finds the corresponding [CtxtIndex](#) given column name

5.7.2.5 indexOf() [1/2]

```
unsigned long HDB_supergate_::CtxtIndexFile::indexOf (
    std::string )
```

Returns the index given the column name

5.7.2.6 indexOf() [2/2]

```
unsigned long HDB_supergate_::CtxtIndexFile::indexOf (
    std::string )
```

Returns the index given the column name

5.7.2.7 insert() [1/2]

```
void HDB_supergate_::CtxtIndexFile::insert (
    std::string colname,
    CtxtIndex & index )
```

Inserts [CtxtIndex](#) for given colname

5.7.2.8 insert() [2/2]

```
void HDB_supergate_::CtxtIndexFile::insert (
    std::string colname,
    CtxtIndex & index )
```

Inserts [CtxtIndex](#) for given colname

The documentation for this class was generated from the following files:

- HDB_comparison_library/include/HDB_supergate.hpp
- HDB_comparison_library/src/HDB_supergate.cpp

5.8 HDB_supergate_::HEQuery Class Reference

Object representing a query object used to query the HEDB.

```
#include <HDB_supergate.hpp>
```

Public Member Functions

- [HEQuery](#) (helib::PubKey &pk)
- void **insert** (unsigned long src, helib::Ctxt &EQ, helib::Ctxt <, helib::Ctxt &qry, std::vector< unsigned long > dst)
- [HEQuery](#) (helib::PubKey &pk)
- void **insert** (unsigned long src, helib::Ctxt &EQ, helib::Ctxt <, helib::Ctxt &qry, std::vector< unsigned long > dst)

Public Attributes

- unsigned long [source](#)
- helib::Ctxt [query](#)
- std::pair< helib::Ctxt, helib::Ctxt > [Q_type](#)
- std::vector< unsigned long > [dest](#)

5.8.1 Detailed Description

Object representing a query object used to query the HEDB.

5.8.2 Constructor & Destructor Documentation

5.8.2.1 HEQuery() [1/2]

```
HDB_supergate_::HEQuery::HEQuery (
    helib::PubKey & pk ) [inline]
```

Constructor of the [HEQuery](#) class

The constructor takes in the public key to initialize query ciphertext and query type ctxt pair.

Parameters

pk	reference to the public key
------	-----------------------------

5.8.2.2 HEQuery() [2/2]

```
HDB_supergate_::HEQuery::HEQuery (
    helib::PubKey &  $pk$  ) [inline]
```

Constructor of the [HEQuery](#) class

The constructor takes in the public key to initialize query ciphertext and query type ctxt pair.

Parameters

pk	reference to the public key
------	-----------------------------

5.8.3 Member Data Documentation**5.8.3.1 dest**

```
std::vector< unsigned long > HDB_supergate_::HEQuery::dest
```

Collection of destination columns to query. TODO: encrypt these

5.8.3.2 Q_type

```
std::pair< helib::Ctxt, helib::Ctxt > HDB_supergate_::HEQuery::Q_type
```

query type EQ <E(1), E(0)>, LT <E(0), E(1)>, or LEQ <E(1),E(1)>

5.8.3.3 query

```
helib::Ctxt HDB_supergate_::HEQuery::query
```

the query ciphertext

5.8.3.4 source

```
unsigned long HDB_supergate_::HEQuery::source
```

The source column index. TODO: encrypt this too

The documentation for this class was generated from the following file:

- HDB_comparison_library/include/HDB_supergate.hpp

5.9 HDB_supergate_::PtxtIndex Class Reference

class representing a plaintext index

```
#include <HDB_supergate.hpp>
```

Public Member Functions

5.9.1 Detailed Description

class representing a plaintext index

A plaintext index is a collection of <key, [uid]> pairs, so each key is mapped to a list of uids that describe rows in the DB. Key are currently represented as integers.

5.9.2 Member Function Documentation

5.9.2.1 C() [1/2]

```
int HDB_supergate_::PtxtIndex::C ( ) [inline]
```

returns c, the maximum length of values array

5.9.2.2 C() [2/2]

```
int HDB_supergate_::PtxtIndex::C ( ) [inline]
```

returns c, the maximum length of values array

5.9.2.3 empty() [1/2]

```
bool HDB_supergate_::PtxtIndex::empty (
    long key )
```

true if queried key does not have any values mapped to it

5.9.2.4 empty() [2/2]

```
bool HDB_supergate_::PtxtIndex::empty (
    long )
```

true if queried key does not have any values mapped to it

5.9.2.5 getKeys() [1/2]

```
std::vector<long> HDB_supergate_::PtxtIndex::getKeys ( ) [inline]
```

returns the keys vector

5.9.2.6 getKeys() [2/2]

```
std::vector<long> HDB_supergate_::PtxtIndex::getKeys ( ) [inline]
```

returns the keys vector

5.9.2.7 getSize() [1/2]

```
long HDB_supergate_::PtxtIndex::getSize (
    long key )
```

gets the size of index vector for given key

5.9.2.8 getSize() [2/2]

```
long HDB_supergate_::PtxtIndex::getSize (
    long )
```

gets the size of index vector for given key

5.9.2.9 insert() [1/2]

```
void HDB_supergate_::PtxtIndex::insert (
    long k,
    unsigned long v )
```

inserts value v into key k

5.9.2.10 insert() [2/2]

```
void HDB_supergate_::PtxtIndex::insert (
    long k,
    unsigned long v )
```

inserts value v into key k

5.9.2.11 popBack() [1/2]

```
long HDB_supergate_::PtxtIndex::popBack (
    long key,
    bool empty = false )
```

removes the right-most key value from keys vector

5.9.2.12 popBack() [2/2]

```
long HDB_supergate_::PtxtIndex::popBack (
    long ,
    bool empty = false )
```

removes the right-most key value from keys vector

5.9.2.13 printIndex() [1/2]

```
void HDB_supergate_::PtxtIndex::printIndex ( )
```

debug function to print the index

5.9.2.14 printIndex() [2/2]

```
void HDB_supergate_::PtxtIndex::printIndex ( )
```

debug function to print the index

5.9.2.15 R() [1/2]

```
int HDB_supergate_::PtxtIndex::R ( ) [inline]
```

returns the number of keys

5.9.2.16 R() [2/2]

```
int HDB_supergate_::PtxtIndex::R ( ) [inline]
```

returns the number of keys

The documentation for this class was generated from the following files:

- HDB_comparison_library/include/HDB_supergate.hpp
- HDB_comparison_library/src/HDB_supergate.cpp

5.10 HDB_supergate_::PtxtIndexFile Class Reference

class representing a collection of PtxtIndexes

```
#include <HDB_supergate.hpp>
```

Public Member Functions

- `std::vector< std::pair< std::string, PtxtIndex > > & getIndexFile ()`
- `void insert (std::string col, long k, unsigned long v)`
- `void printIndex (std::string col)`
- `void printIndexFile ()`
- `std::vector< std::pair< std::string, PtxtIndex > > & getIndexFile ()`
- `void insert (std::string col, long k, unsigned long v)`
- `void printIndex (std::string col)`
- `void printIndexFile ()`

5.10.1 Detailed Description

class representing a collection of PtxtIndexes

The plaintext index file is the object representing lots of plaintext indexes. It is represented as a vector of <column name, [PtxtIndex](#)> pairs, with an index associated with each column of a DB.

5.10.2 Member Function Documentation

5.10.2.1 getIndexFile() [1/2]

```
std::vector<std::pair<std::string, PtxtIndex> >& HDB_supergate_::PttxIndexFile::getIndexFile
( ) [inline]
```

getter for the IndexFile

5.10.2.2 getIndexFile() [2/2]

```
std::vector<std::pair<std::string, PtxtIndex> >& HDB_supergate_::PttxIndexFile::getIndexFile
( ) [inline]
```

getter for the IndexFile

5.10.2.3 printIndex() [1/2]

```
void HDB_supergate_::PttxIndexFile::printIndex (
    std::string col )
```

inserts for column col, key k, value v debug function for printing a particular index, given column name

5.10.2.4 printIndex() [2/2]

```
void HDB_supergate_::PttxIndexFile::printIndex (
    std::string col )
```

inserts for column col, key k, value v debug function for printing a particular index, given column name

5.10.2.5 printIndexFile() [1/2]

```
void HDB_supergate_::PttxIndexFile::printIndexFile ( )
```

debug function for printing the entire [PtxtIndexFile](#)

5.10.2.6 printIndexFile() [2/2]

```
void HDB_supergate_::PttxIndexFile::printIndexFile ( )
```

debug function for printing the entire [PtxtIndexFile](#)

The documentation for this class was generated from the following files:

- HDB_comparison_library/include/HDB_supergate.hpp
- HDB_comparison_library/src/HDB_supergate.cpp

5.11 HDB_supergate_server_::SERVER Class Reference

Class that contains the DB and is queried upon.

```
#include <HDB_supergate_server.hpp>
```

Public Member Functions

- [SERVER](#) ([he_cmp::Comparator](#) &comparator, [HDB_supergate_::Ctxt_mat](#) &db, [HDB_supergate_::Ctxt_↵IndexFile](#) &indFile, bool v)
- void **Query** ([HDB_supergate_::HEQuery](#) &query, [HDB_supergate_::Ctxt_mat](#) &result)

- void **QueryWithIndex** ([HDB_supergate_::HEQuery](#) &query, [HDB_supergate_::Ctxt_mat](#) &result)
- void **testTS** (Ctxt &)
- [SERVER](#) ([he_cmp::Comparator](#) &comparator, [HDB_supergate_::Ctxt_mat](#) &db, [HDB_supergate_::Ctxt_↵IndexFile](#) &indFile, bool v)
- void **Query** ([HDB_supergate_::HEQuery](#) &query, [HDB_supergate_::Ctxt_mat](#) &result)
- void **QueryExtensionField** ([HDB_supergate_::HEQuery](#) &query, [HDB_supergate_::Ctxt_mat](#) &result)
- void **QueryWithIndex** ([HDB_supergate_::HEQuery](#) &query, [HDB_supergate_::Ctxt_mat](#) &result)
- void **testTS** (Ctxt &)

5.11.1 Detailed Description

Class that contains the DB and is queried upon.

[SERVER](#) class contains the encrypted database and the encrypted index file. This simulates the REE.

5.11.2 Constructor & Destructor Documentation

5.11.2.1 SERVER() [1/2]

```
HDB_supergate_server_::SERVER::SERVER (
    he\_cmp::Comparator & comparator,
    HDB\_supergate\_::Ctxt\_mat & db,
    HDB\_supergate\_::CtxtIndexFile & indFile,
    bool v ) [explicit]
```

Constructor of the [SERVER](#) class

Parameters

<i>comparator</i>	the reference to comparator class
<i>db</i>	reference to the encrypted database
<i>indFile</i>	reference to the encrypted index file
<i>v</i>	verbose

5.11.2.2 SERVER() [2/2]

```
HDB_supergate_server_::SERVER::SERVER (
    he_cmp::Comparator & comparator,
    HDB_supergate_::Ctxt_mat & db,
    HDB_supergate_::CtxtIndexFile & indFile,
    bool v ) [explicit]
```

Constructor of the [SERVER](#) class

Parameters

<i>comparator</i>	the reference to comparator class
<i>db</i>	reference to the encrypted database
<i>indFile</i>	reference to the encrypted index file
<i>v</i>	verbose

5.11.3 Member Function Documentation

5.11.3.1 testTS() [1/2]

```
void HDB_supergate_server_::SERVER::testTS (
    Ctxt & )
```

debugging function for SERVER::totalSums

5.11.3.2 testTS() [2/2]

```
void HDB_supergate_server_::SERVER::testTS (
    Ctxt & ctxt )
```

debugging function for SERVER::totalSums
